

Streamlined, centralized control of ID and access rights

Identity and credential management is a complex business for many modern organizations. Creating and adhering to security policies designed to deliver necessarily high levels of protection can be difficult, particularly when dealing with large and fluctuating employee numbers, multiple locations, numerous operating processes and several supporting technologies. Intercede's MyID brings order and ease to identity and credential management via one single, highly configurable product.

What is MyID?

MyID is a unique solution which manages the complete identity, device and credential lifecycle. Taking ID card management to a new level, MyID is highly flexible: far more than a basic card management system, MyID is a customizable, functionally-rich Identity and credential management system. At every stage of the identity lifecycle - registration, identity verification, device and credential issuance and post-issuance management - MyID delivers complete control and meets the demands of today's security conscious organizations.

What can MyID do for you?

For corporate enterprise

MyID manages the devices and credentials used for photo ID badges, physical access to buildings and logical access to PC's: easily, simply and centrally. Highly adaptable, it can be configured to meet the specific requirements of different industries including banking, telecom, government and healthcare. MyID 'plugs in' quickly and easily to existing HR, Directories, provisioning systems and physical access systems; making it simple to realize further ROI from current technology and security investments.

For government and public sector

MyID facilitates efficient management of identities and credentials within high security environments, as well as specialist areas such as national ID, emergency and first responder services, transportation, driving license management and airports. MyID is the only solution to deliver registration, ID verification and ID issuance within a single product, thus keeping cost, risk and time to deployment minimized. Secure audit trails and centralized revocation provide a further layer of protection.

Identity and Credential Management System (IDCMS)

MyID features and benefits at a glance

A single, consistent interface: For all identity registration and verification, device and credential policy enforcement and lifecycle activities. MyID reduces complexity and improves centralized control.

Simple integration: with a wide range of security technologies and systems: Out of the box integration results in fast set up and quick access to security benefits.

Easy to use: Provides step-by-step workflows that walk users through all identity registration, identity verification, device and credential management tasks, minimizing training requirements and time.

Highly flexible and configurable: Easy to define security policies and business process for issuance and management of identity credentials across unlimited user groups in geographically dispersed locations.

Comprehensive auditing and reporting: Built in, secure audit trails for secure process management, compliance and reporting.

Lifecycle management of users, identity devices and credentials

Registration

Registration of applicants is easy with MyID. Via fast and efficient individual processing; MyID co-ordinates photo, fingerprint and facial biometric data capture, document scanning and storage, as well as personal data such as DOB, job role etc.

Identity vetting

Uniquely incorporated as an integral part of the complete solution, MyID also includes management of background checking and ID verification processes to validate individual identities.

Issuance

MyID supports most device types including contact and contactless smart cards, USB, OTP tokens and accommodates multiple issuance processes. MyID also manages credentials such as: PKI certificates, single sign-on credentials, physical and logical access and keeps all systems updated (including third party).

Post issuance management

MyID makes the ongoing management of credentials including updates and changes, renewal, unlocking, suspension, cancellation and revocation easy to carry out, manage and audit. Self service is easy to set up too.

What's new in MyID Version 8

Enhanced registration: Including support for capturing facial biometrics, fingerprints, and document scanning.

Built-in identity verification: Integrated with identity background checking and biometric verification services for fast identity checking and verification.

Simplified physical and logical access convergence: Made easy through standard physical access system connectors and centralized ID access rights control.

Comprehensive integration toolkit: Makes customization, enhancement and integration with existing systems simple. Includes APIs, documentation, sample code, training and consultancy support for systems integrators.

Why choose MyID?

Ensures good governance standards and risk management processes are easily enforced.

Easy to install, configure and operate.

Reduces the operating costs associated with managing multiple credentials and systems.

Integrates easily with existing systems.

MyID meets the US Federal Government standards for personal identity verification for its employees and contractors (FIPS 201), and was the first solution to be certified by the GSA for electronic personalization.

A proven, low-risk solution supported by a dedicated in-house team of ID security experts. MyID is successfully deployed in multiple locations around the world.
